

# TELLKAMP SYSTEMS, INC.

## Spectrum Metal Finishing

**“Putting the Environment First”**

**Spectrum Metal Finishing has completed installation of their Tellkamp Systems Roxidizer® RTO volatile organic compound (VOC) abatement system. The state of the art abatement system captures 98.7% of the emissions from the liquid paint line and sends them to the Roxidizer® regenerative thermal oxidizer for destruction.**

**Tellkamp's Roxidizer® technology converts the pollutants to harmless CO<sub>2</sub> and water vapor for an environmentally green painting process. The VOC abatement system at Spectrum exceeds the maximum available control technology (MACT) standards as set forth by the United States EPA and puts Spectrum in the top tier of metal finishers in the U.S.**
